

Actually, we are TANOI.

“Actual” TANOI hidden under a veil

Actually, we are the No. 1 Tier 1 supplier in the dental industry!

TANOI has been the No. 1 partner of top listed medical device manufactures for over 30 years.

Actually, we are the world standard.

We came up with the machining method for mass-producing a vane nozzle, which is a core part in VG turbochargers equipped as standard on diesel engines, for the first time in the world! We developed the method by ourselves and established the position of the TANOI brand in the turbocharger industry.

Actually, we take it this far.

Our Vietnam plant mass-produces impellers for turbocharges (120,000 pieces/month) including balancing. The yield rate is more than 99%!

Actually, we are good at this too.

We've been handling pure titanium with various types of machining since 12 years ago. Now we can process it just like any other general materials.

Actually, we introduce new technologies and new systems quickly.

This includes ecological activities such as electricity saving, 3-series complex machining equipment, paperless operation using cloud and globalization by transferring headquarters' functions overseas.

Actually, we have a strong preference for equipment.

We introduced more than 60 units of high precision CNC automatic lathes manufactured by Tsugami. We differentiate ourselves from competitors with our unique modification and maintenance methods.

Actually, we have a production site in Vietnam.

TANOI's production site, SEEBEST, employs 150 people and everyone was hired locally. The company is managed and controlled by Vietnamese staff only and it is considered to be a localization model.

Actually, we have a history.

It has been almost 60 years since our company was established. We are full of unique know-how.

Actually, the president and employees are young!

We will continue to grow! Many of the employees are in their 30s and everyone is highly motivated. The president grew up being at the production site! He is fluent in English and has a hands-on policy. He also has an MBA.

Actually, this is the first time for us to join an exhibition in Japan.

We would like to challenge new things to further expand our technical capabilities.

Actually, we are a blue-chip company in Tochigi.

We are certified as a frontier company by the Tochigi Prefecture. We were introduced as a recommended example.

Actually, we are well known by those in the know and the last bastion of precision equipment manufacturers.

TANOI
